### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method and apparatus for transmitting a pulse signal over a transmission channel between the transmitting station and a communicating receiving station. A search of prior art records has failed to teach or suggest, alone or in combination:

A method comprising:

“pre-distorting, by the transmitting station, signal transmissions over the transmission channel between the transmitting station and the communication receiving station to eliminate channel echoes in transmitted data signals by using an echo structure of the received delay/amplitude echo map of the transmission channel” (pg. 9, paragraph [0041] of the specification) including the remaining limitations as disclosed in claim 1.

A computer readable storage medium<sup>1</sup> including program instructions that, when executed by a processor, cause a computer to perform a method comprising:

“pre-distorting, by the transmitting station, signal transmissions over the transmission channel between the transmitting station and the communication receiving station to eliminate channel echoes in transmitted data signals by using an echo structure of the received delay/amplitude echo map of the transmission channel” including the remaining limitations as disclosed in claim 8.

An apparatus comprising:

“a communication interface to transmit a pulse signal over a transmission channel to a transmission communication receiving station and to repeat the transmission of the pulse signal over the transmission channel until a delay/amplitude echo map of the transmission channel is received from the communication receiving station,

wherein the communications interface is to pre-distort signal transmissions over the transmission channel to eliminate channel echoes in transmitted data signals by using an echo structure of the received delay/amplitude echo map of the transmission channel” (pg. 9, paragraph [0041] of the specification) as disclosed in claim 15.

A system comprising:

“a delay line coupled to the communications interface, the delay line including a plurality of non-uniformly spaced taps, the non-uniform taps to enable sampling of varying delay echoes” (pg. 9, paragraph [0037] of the specification) including the remaining limitations as disclosed in claim 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

<sup>1</sup> The computer-readable medium does not refer to signal, wave or any non-statutory subject matter (Fig. 5, discloses

### CONCLUSION

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a.) Sasaki et al. discloses an XDSL Transceiver in US Patent 6,845,125 B1 wherein he teaches an echo suppression unit for suppressing the echo signal from the transmitting unit to the receiving unit, but fails to teach the invention as disclosed in the instant application.

b.) Bors discloses an Echo Cancelling Softmodem in US Patent 6,411,656 B1 but fails to teach the invention as disclosed in the instant application.

c.) Aly et al. discloses removing transmit pulse echoes by echo-cancellation in US Patent 4,995,031 but fails to teach the invention as disclosed in the instant application.
